

DEPLOYMENT VIEW

Item Number	Description
1	Brass Ring is an external vendor system which obtains candidate and prior work experience information.
1a	The HR business unit extracts data from the Brass Ring system and provides this data as a set of file in a comma separated values format.
2	EPIC (SAP) has a scheduled TIBCO process which extracts employee data from SAP and provides this data as file in pipe-delimited format.
3	CAMPAIGN DATABASE links to the set of data files from 1a and 2 and imports the data into the CAMPAIGN DATABASE system
4	CAMPAIGN DATABASE exports employee and PWE information to a data file for use by the Salary Management system

IMPLEMENTATION VIEW (OPTIONAL)

Production Directory Structure

database directory <project root>

The root directory of the CAMPAIGN DATABASE system development environment. The main interface applications are located here. By default the interface applications search for files relative to this location. Includes:

- CAMP_FE.mdb – The main user interface

data subdirectory

The directory that contains the mdb files where the data is actually stored. Includes:

- CAMP_BE.mdb
- CAMP_Temp.mdb
- CAMP_Config.mdb
- CAMP_[Custom].mdb

doc subdirectory

The directory that contains documentation artifacts that are closely related to code artifacts. These artifacts include:

- requirements
- business rules
- UML models
- User manuals and tutorials

system subdirectory

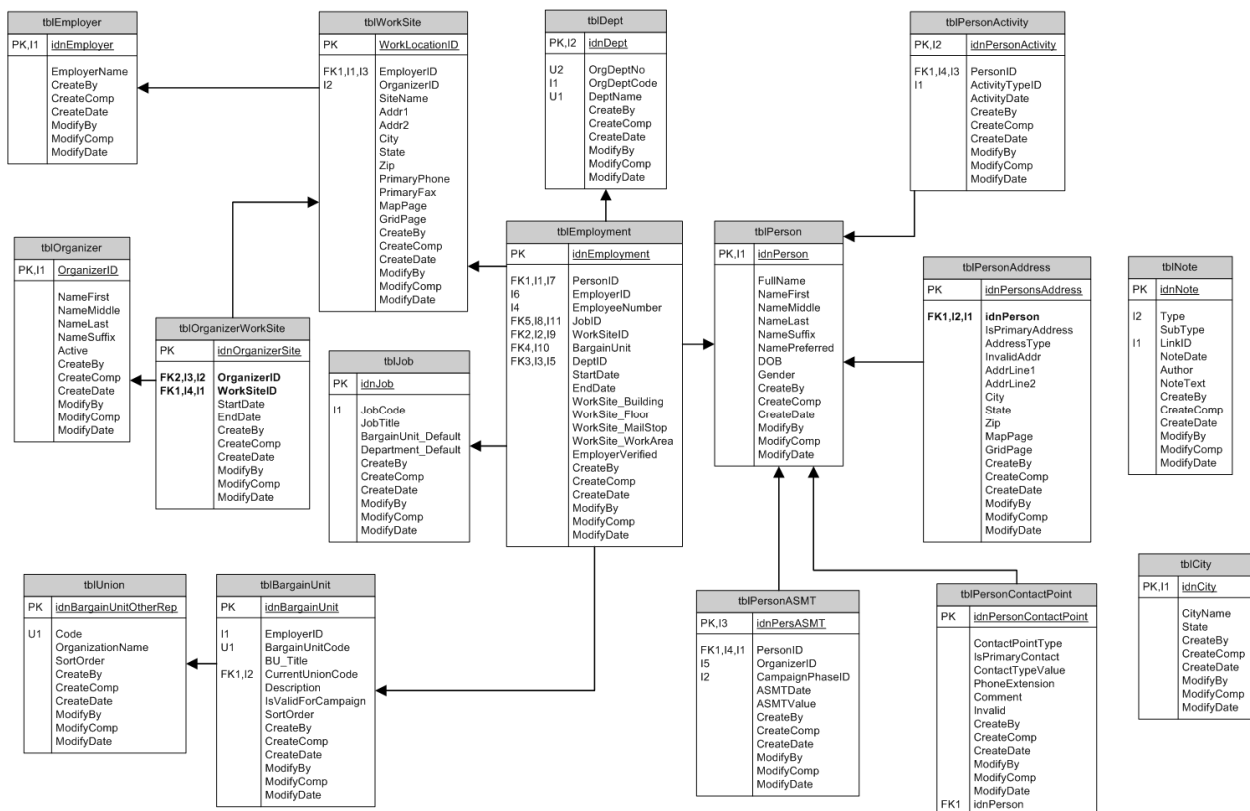

The directory that contains the workgroup file used to develop and use the CAMPAIGN DATABASE system.

CAMP_BE_ERD.vsd

Significant Design Notes:

Notes: the Notes table does not support referential integrity directly. Support for relating data is performed programmatically by the interface application.
